Diabetes

Diabetes is a global epidemic, affecting an increasing number of men, women, and children all over the world. It can lead to serious diseases affecting the heart and blood vessels, eyes, kidneys, nerves and teeth. In most high-income countries, diabetes is a leading cause of cardiovascular disease, blindness, kidney failure, and lower limb amputation. It is expected to affect 629 million adults by 2045. Serving in diverse communities all over the world, we see and feel the effects of diabetes and are doing something about it together. Our strategic objective is to reduce the prevalence of diabetes and improve quality of life for those diagnosed.
